

SN "C" Version Self-Priming, Non-Clogging Pump

Document No: SP-ENG-070

Revision: 21.1 (04/07/2021)

"C" Version Benefits

Armed with the Switchback™, the "C" Version effectively manages stringy solids and reduces downtime. Switchback's durable ADI construction and aggressive sawtooth architecture tears apart stringy solids caught on the impeller. Thus, reducing equipment clogging by freeing the material to continue through the flow path and out of the pump.

Armed with the
Switchback™
Clog Reducing Wear Plate

Impeller

Semi-open, two vane non-clog type impeller effectively handles solids. Shrouds on the backside of the impeller reduce material build-up and reduce pressure on seal and bearings, resulting with longer time between maintenance.

Available Pump Configurations

Pump Models	SN & SNS				
Pump Sizes	3"	4"	6"	8"	10"
Pump Materials	Iron, 316 Stainless, CD4, ADI				
Impeller Design	2 Vane
